Sudoku evil tips

Evil Sudoku Solution Techniques like the Jellyfish or the Medusa can seem more complicated and harder to understand than the puzzle itself. In fact, they are derived from patterns created by hard level techniques. If you don't want to litter your mind with patterns seemingly coming from an advanced math book, the best way to tackle a vicious Sudoku puzzle is by applying all your previously learned strategies. Start with the ones you first use in the easy levels and work your way through the grid until you reach the XY-Wing technique. You'll be bound to find the solution of at least one cell by doing so. Since the roster of Sudoku is constantly evolving and placing a digit each time unlocks new possibilities, you should keep replicating these techniques. Try switching your way from easy to hard and hard every time to keep finding the hidden numbers and set new candidates for the cells. It sounds easy in theory, but in practice it will be difficult to achieve. Patience and concentration are essential to complete a vicious puzzle. You may also want to take breaks while solving them to give your eyes and brain a rest and come back to tackle it with a clear mind. Taking notes is a requirement to solve a vicious puzzle, but remember to update and clean it up every time you post a figure to try to make the game easier step by step. Most importantly, not trying to guess a solution, or you can make the puzzle insoluble and wreck your brain with something impossible. I can't sit in the Cube at the Desk of Hate all day. When it's time for this monkey to have a smoke, I usually take a sudoku puzzle with me. I do 'em in the train to and from work as well. I've done so much that I can do the most puzzles at the hardest level in under 10 minutes. Fortunately, Berti smokes and avoids so the smoking room which means I'm not subject to his opinions on how the puzzles work. I don't use strategies like Advanced crossbreeds, X-wing, Swordfish and the like; for me, they're obvious and nothing more than long names and descriptions for what I already do: scan numbers in rows and columns and when it's all set, start looking for pairs and triplets. However, there is a rule I came up with a year ago that I call Uniqueness. No other site ever explained it, and when I sent it to the man with the former Numbah Wun sudoku strategy website, he gave me nothing but a Pish and tosh. Fine. Fuck 'im. He's wrong, I'm right, you benefit. NOTE: This method does not work on Killer or Killer-variant Sudoku puzzles because the numbers are also mathematically related because of the cages. It's working on everything else. This uniqueness method can be demonstrated with Websudoku's Evil Puzzle #7,645,498,690. First we get some numbers out of the way: Looking for pairs we have two blocks with 5 and 6. If all four of those boxes are either 5 or 6, then that's an illegal puzzle. That would have two answers. One square also has an added alternative alternative Uniqueness requires that it cannot be either 5 or 6, this alternative should be the answer. After that, we can fill in a lot of numbers, starting with the 1 in the bottom left quadrant since 5 and 6 are still blocked in that row, forcing the number below the newly placed 1 to be a 6, and so on. From 45 open spaces we're off to 29. Monday I came across Websudoku's Vicious Puzzle #8,351,019,029: After some quick scan to fill in the obvious, we have it: Pretty simple, but now what? I noticed the 1 and 9 in the lower middle block, and that's significant because there's a 1/9 pair in the upper middle block: Now that still leaves three empty spaces for which I only know two numbers, but then uniqueness comes into play. In the example, blocks A and B both include the same 1/9 pair while block D has the 1/9 and a third number: There is only one of three possible ways to fill two of the circles with 1/9 giving a legal result. Circles B and C cannot be 1/9 because there is already a box in that column that can only be a 1/9. Circles A and C cannot be 1/9: it will violate the Uniqueness property so two different ways can resolve for 1 and 9. That leaves A and C: Since the 3 and 8 in the second row from the bottom can only be placed on top of this bottom middle box, position B should be a 4. This is the first time I've come across Uniqueness early as a factor. It usually appears pretty late in a puzzle with some somewhere and the same pair reflect elsewhere, but with a third possibility for one of them. The Uniqueness Strategy always works (by definition it should), and is often the last re-recalcify before guessing. While extremely rare, Uniqueness can also be used if nine spaces house the same pairs/triplets over three rows or columns, along with one extra possible digit in one of those spaces. If I see it again, I'll add it here. These days I do Killer, Bigger-than, and Bigger-than-Killer Sudokus. This fucking isn't a joke when they call their weekly puzzles mind-bending. I'm grateful to Websudoku (as well as Sudoku.org.uk) for all the puzzles they provided me, but nowadays I get more challenging things from Killer Sudoku Online. If anyone has any links to websites offering regular supplies of other sudoku variants (pips and shared cell, for example), please let me know in the comments. Note: These graphics gave me a chance Paint.NET try for the down-and-dirty crap I normally do in PaintShop Pro 3. While it's still young, it's pretty damn good. An imitation Photoshop to be sure, the features it lacks are made up by the usage tool. They need to make layers copyable and savable; I had to draw the red shade for each graphic individually. The learning curve is very shallow if you know Photoshop and still aren't terribly steep if you don't.x-posted HuSi, where there is a poll. Sudoku Invitations We invite all expert sudoku players to join our sudoku kingdom community enjoy our vibrant sudoku atmosphere. New york times sudoku players, Welcom! USA today sudoku players, Welcom! Chicago tribune sudoku players, Welcom! Washington post sudoku players, Welcom! Krazydad sudoku players, Welcom! The LiveSudoku gameplay features If you are a regular user here you probably know the great ease in which the game is set in our sudoku kingdom. For you, the new visitor, a great feature we have, has been called highlighter rate, highlighting the figure you want across the entire grid, making it very eye-friendly to see that elusive empty cell. For the advanced sudoku games, you can use the pencil mark that allows you to type more than one optional digit into a specific cell, so you can shred all the optional numbers. There's also an undoing button that's so useful. You can check yourself with the check solution button at any time. You can press the options button and customize your preferences of some colors and our help level. So start playing web sudoku easy level and have fun! About live sudoku Live-Sudoku was created in 2006 and is one of the original websudoku sites. The creator of the website Mr. Izenberg built it with the same love he has for the game. LiveSudoku is home to all Sudoku players around the world from easy and medium sudokus to hard and vicious sudoku levels. You can invite a fellow Sudokuer for a game of speed and concentration. Sign up to track your stats, see your best and worst games and compete in the arena of sudoku enthusiasts. Enjoy your game! Sudoku evil is basically a classic 9x9 roaster Sudoku puzzle with a much more complex difficulty level. When playing Evil Sudoku, a player must first complete his level 1 puzzle then move to the remaining three levels. With each level, the puzzle becomes more confusing. With its complexities, most Sudoku players find the first level already very difficult to complete. You'll see that in a vicious Sudoku skin there are far fewer predetermined numbers. Usually, a single subplein contains only 4 given numbers at most. You can even find subplein with only 1 or 2 numbers. That alone makes it very difficult to solve. However, the difficult nature of it makes it very challenging that many Sudoku enthusiasts are very addicted to it. This kind of Sudoku puzzle is very good for the people who love puzzle challenges. If you are able to complete the 4 levels of Evil Sudoku, then you may consider yourself someone extraordinary because this kind of puzzle is very complex and far from ordinary. For those who want to try the completion of this particular Sudoku puzzle, here are some things you should keep in mind: To make completing a Evil Sudoku puzzle less difficult, what you have to do is answer those sub-squares with the most predetermined numbers first for them is much easier to complete compared to that with much less given (just like in a regular Sudoku puzzle). However, keep in mind that the word easily still means difficult when you try to complete this particular kind of Sudoku puzzle. Since each subplein can contain 4 given, try to fix first those sub-squares with the limited number given. As with any Sudoku puzzle, once you start to successfully complete a number of sub-squares the chances for you to complete the entire puzzle increases. However, his complexity requires each player to give extra effort to successfully complete the 4 levels of this particular Sudoku puzzle. You must analyze the puzzle very carefully before you can determine those possible numbers for a certain box. Logic is indeed a very important tool in completing this puzzle. Other than that, you should use a pencil with eraser in solving this puzzle because it's one of the most confusing Sudoku puzzles you can figure out there - even expert Evil Sudoku players still use this tool. Also, using a pencil, you can write numbers that possibly fit a particular box and write it inside that box and delete that disability afterwards. This process of number elimination can be very useful to use with this kind of Sudoku puzzle. If patience is highly needed in solving regular Sudoku puzzles, completing a Vicious Sudoku puzzle requires you much more than that. You need not only a great patience, but also the will and determination to complete its four tough and confusing levels. And to do that, you have to use your mind and have a character that's much harder than the puzzle itself. If you have all these qualities, it is not impossible for you to successfully complete the four levels of Sudoku Evil. Test yourself now and find out if you have what it takes to complete it. It.
